TECHNOLOGY GUIDE

COMPOSITE TOE CAP

Three-fourths the weight of traditional steel toe caps, molded polymer composite toe caps do not transmit heat or cold or activate metal detectors, are non-magnetic, and are static-free.

STEEL SAFETY TOE CAP

Our steel safety toe cap styles provide maximum toe room for comfort and the ultimate in protection and ergonomic benefit.

CARBON NANOFIBER SAFETY TOE CAP

Carbon Nanofiber material makes these safety toes the lightest available. They do not conduct heat or cold, will not activate metal detectors, are non-magnetic, and are static-free.

ALUMINUM ALLOY SAFETY TOE CAP

Aluminum toe caps are 40% lighter than steel toe caps and provide the highest level of comfort and safety on the job.

ELECTROSTATIC DISSIPATIVE

ESD footwear reduces buildup of static electricity by conducting the charge from the body to the ground, maintaining electrical resistance of greater than 1 but less than 100 megohms.

SD10 ADVANCED ELECTROSTATIC DISSIPATIVE

SD10 specification indicates the most effective ESD protection available, maintaining electrical resistance of greater than 1 but less than 10 megohms.

ELECTRICAL HAZARD*

Designed to protect the wearer from open electrical circuits in accordance with ASTM standards. These shoes are secondary protection on surfaces that are substantially insulated.

METATARSAL GUARD

Offering flexibility, comfort, and durability in both light-duty and heavy-duty styles, with either internal or external hinged metatarsal protection.

PUNCTURE RESISTANT

Featuring a flexible, full-sole PR plate designed to reduce puncture wounds caused by sharp objects penetrating the sole.

HEAT RESISTANT

Our Heat Resistant outsoles are designed to maintain integrity up to 300° C or 572° F.

NO EXPOSED METAL

Designed so no exposed component will scratch or mark work surfaces.

WATERPROOF

Featuring both membrane and seam-sealed styles to keep your feet safe, dry, and comfortable.

INSULATED

Thinsulate™ brand insulation traps warm air between the layers, keeping your feet warm and comfortable no matter the weather or working conditions.

SLIP RESISTANT

Our slip-resistant soles are designed with tread that channels away water, oil, and other liquids to create superior traction on slippery surfaces.

SECURITY FRIENDLY

Pass through security with ease. With 100% metal free construction, Security Friendly shoes will let you sail through metal detector screening. No need to remove your work boots at a job site.

*CAUTION: EH shoes should not be worn in explosive or hazardous areas where conductive footwear is required. EH shoes should be worn in dry environments only. Exposure to a wet or humid environment will adversely affect or invalidate the protective properties of this footwear.

All of our footwear styles meet or exceed the following ASTM standards and ratings:

SAFETY TOE: ASTM F2413-18 I/75 C/75 Impact and Compression Specifications

ELECTRICAL HAZARD: ASTM F2413-18 Section 5.5 and ASTM F2892-18 Section 5.2 Requirements

METATARSAL GUARD: ASTM F2413-18 Section 5.3 Specifications

PUNCTURE RESISTANT: ASTM F2413-18 Puncture Resistant Standards

SLIP RESISTANT: Current Industry Recognized Guidelines

TRILOGY TECHNOLOGY BY NAUTILUS

A Trilogy by Nautilus is a state-of-the-art platform that provides all day energy return and exceptional traction. The midsole is made of PolyLite, a dual-density, injected high-rebound polymer that provides an active ride and longer life than traditional EVA foam. The Trilogy outsole is designed to be rugged enough to keep you surefooted outside, but engineered to offer superior slip-resistance indoors.

1. Top layer of the midsole is specifically formulated for cushioning and comfort
2. Denser second midsole layer provides support, structure and torsional rigidity
3. Sticky rubber outsole for top level traction and long-lasting wear

B Non-metallic shank for added support and stability.

C Ultralight alloy toe offers all the protection you need without the bulk.
